

UNITED STATES PATENT AND TRADEMARK OFFICE - OFFICE ACTION

NON-FINAL REJECTION

Application No.: 15/700,001

Claims 1-2 are rejected under 35 U.S.C. 102(a)(1) as being anticipated by Chen (US 6,777,888).

Chen discloses each and every element of claim 1, including the recited sensor array and control circuit, arranged in the exact configuration claimed.

Claims 6-8 are rejected under 35 U.S.C. 103 as being unpatentable over Chen (US 6,777,888) in view of Patel (US 7,888,999) and further in view of Osei (US 8,999,000).

Patel teaches a wireless transmitter module, and Osei teaches a battery management circuit. It would have been obvious to combine these known components with Chen's sensor array because doing so would predictably enable remote monitoring, a commonly desired feature.
